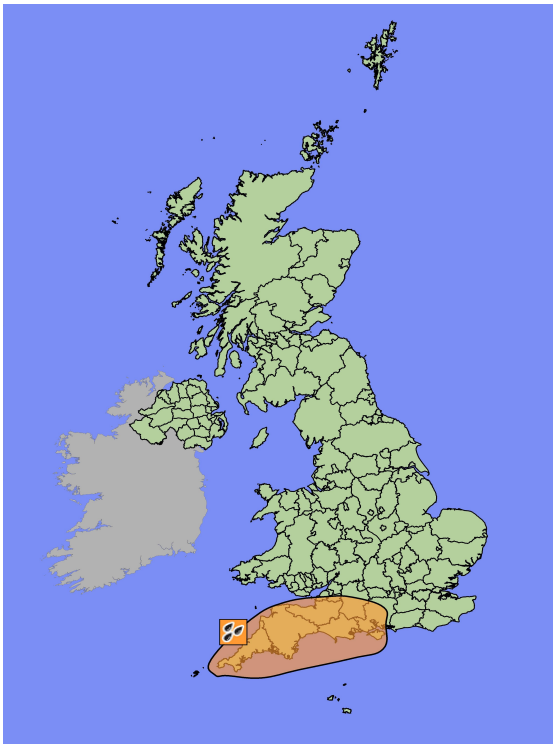
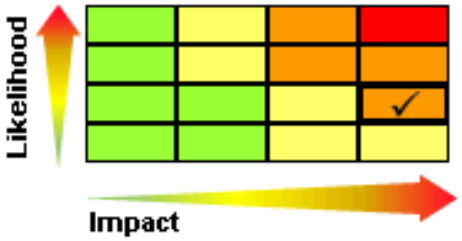
National Severe Weather Warning Service





Chief Forecasters Assessment
The centre of the low pressure system is expected to move north across southwest England during Sunday night, leading to increasingly strong winds as it moves to the north, but most importantly, further spells of heavy rain with the potential for some torrential downpours. An additional 25 to 50 mm of rain is possible in some places during this period.

This warning should be viewed together with the wider area Yellow Warning/ Alerts already issued for Sunday and Monday. Given the uncertainty in the exact track of the low, this Amber warning will be kept under close review and will be updated as required.

The Met Office have issued an **Amber Warning** of **Rain**

Valid from **18:00 on Sun, 23rd Sep 2012** until **09:00 on Mon, 24th Sep 2012**

Periods of heavy rain, including some torrential downpours, are likely to occur across parts of southwest and central southern England during Sunday evening and the first part of Monday. This will be in addition to the rain which will have fallen during the day on Sunday, such that the public should be prepared for an increased risk of both surface water and river flooding during this period.
